# **RE-THINKING PRODUCT ADOPTION THROUGH DOCUMENTATION DESIGN**

Why would we?

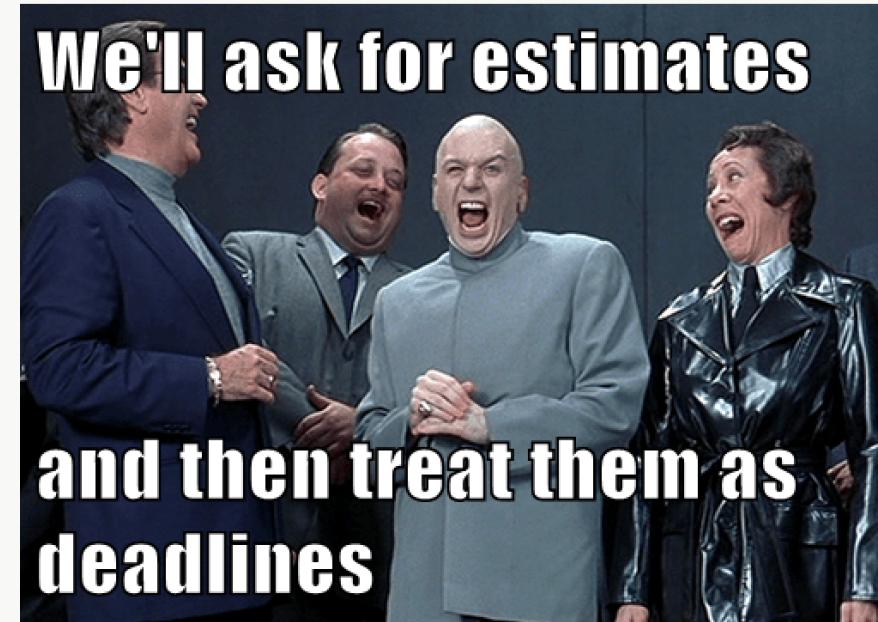

# MOTIVATIONS

- Databases for everyone
- Promote independence
- More and better contributions
- Optimization of Support
- Don't break the bank

**DATABASES = HARD  
SOFTWARE = HARD  
DESIGN = HARD**

- Technical, complex, costly
- Error 404: Design culture not found
- Rapid software dev. ≠ Rapid UX dev.

While we develop growth strategies in-product,  
what else could we do **now**?

# **DOCUMENTATION DESIGN RATIONALE**

## **DEFINE A STRATEGY**

Who's reading our documentation?

How can it help them and us achieve our goals?

How do we know if it is helping?

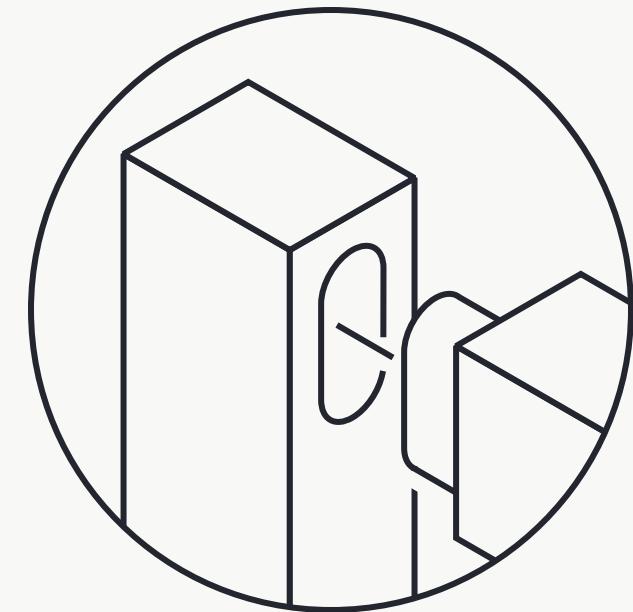

We want documentation to reach out to more **developers** interested in open-source databases for their applications so that adoption increases through more **installations**, proper **retention**, and evident **ease of use**.

## **ESTABLISH CO-OWNERSHIP**

Who could help?

Where's the knowledge?

Who could share responsibilities?

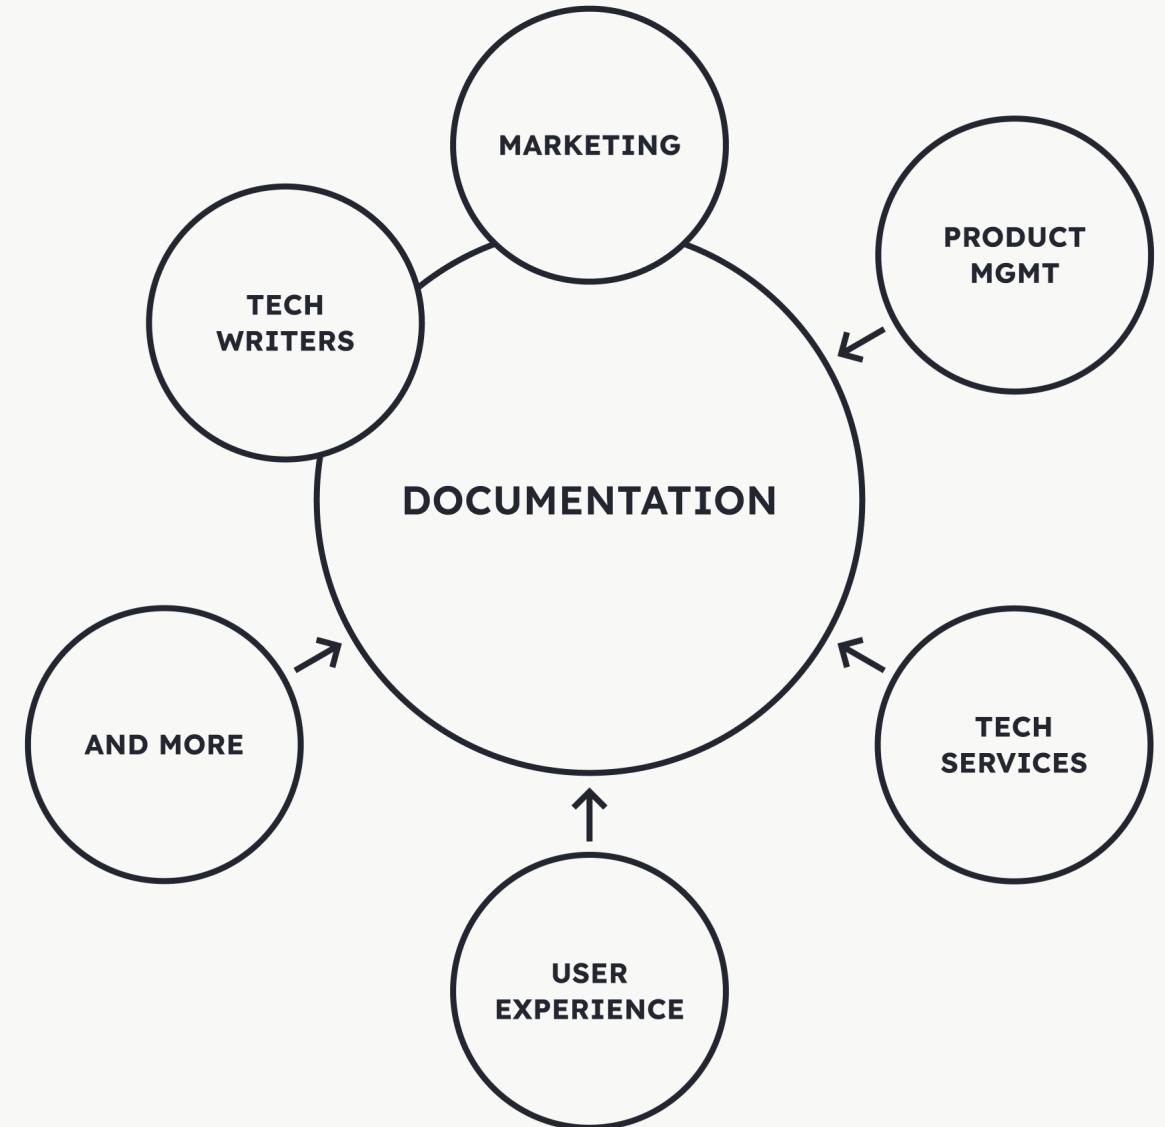

## **Kept**

- Creation of content • Management
- Data analysis

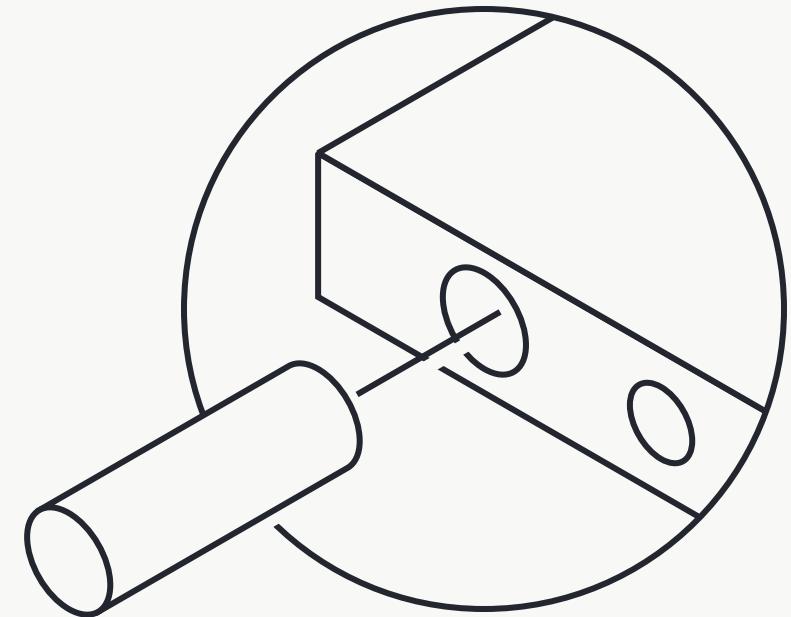

## **Added**

- Speed • Visibility • Openness
- User's POV • Horizontal communication
- New methods • New tools

## **BOOST CLARITY**

Is the content accessible to people?  
Does it provide intuitive access to their needs?  
Are there untapped opportunities?

## BEFORE

The screenshot shows the 'Percona Operator for MySQL 0.6.0 (2023-09-05)' documentation page. The header includes the Percona logo, title, a 'Search' bar, and a navigation bar with links like 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The main content area has a dark blue background with white text. It features a sidebar with 'Features' and 'Release Notes' sections, and the main content includes 'Highlights' (with a list of changes), 'New features' (listing K8SPS-283 and K8SPS-160), 'Improvements' (listing K8SPS-162, K8SPS-163, K8SPS-205, K8SPS-270, and K8SPS-280), and a detailed 'Release notes index' section.

## AFTER

The screenshot shows the 'Latest Release 8.0.33-25' documentation page. The header includes the Percona logo, title, a 'Search' bar, and a navigation bar with links like 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The main content area has a light blue background with dark blue text. It features a sidebar with 'About', 'Features', 'Release Notes', and 'Latest Release 8.0.33-25' sections, and the main content includes 'New features' (listing PS-8188), 'Bug fixes' (listing PS-8647, PS-8683, PS-8713, PS-8719, PS-8747), and 'Useful links' (linking to the GitHub location). A large arrow points from the 'BEFORE' screenshot to the 'AFTER' screenshot.

# Added

- Guidelines and resources to place icons, buttons, dividers, and tabs
- Guidelines to flag critical bits of content and decision-making points

## BEFORE

The screenshot shows a documentation page for the Percona Operator for MySQL. The header includes the title 'Percona Operator for MySQL based on Percona Server for MySQL' and a search bar. The main content is titled 'Install Percona Server for MySQL on Google Kubernetes Engine (GKE)'. It contains sections for 'Prerequisites', 'System Requirements' (specifically 'Install on Google Kubernetes Engine (GKE)'), and 'Create and configure the GKE cluster'. A note at the bottom of the 'Create and configure the GKE cluster' section provides a command-line example:

```
$ gcloud container clusters create my-cluster-name --project <project name> --zone us-central1
```

A 'Note' callout box is present at the bottom.

## AFTER

The screenshot shows a documentation page for Percona Server for MySQL. The header includes the title 'Percona Server for MySQL' and a search bar. The main content is titled 'Quickstart Guides'. It features a 'Quickstart Guides' section with links for 'Install via apt', 'Install via yum', 'Kubernetes', 'Docker', 'Manual Download', and 'Post-installation tips'. Below this, there are sections for 'Install via apt' and 'Install via yum'. A note at the bottom of the 'Install via apt' section provides a command-line example:

```
$ sudo apt update  
$ sudo apt install curl
```

The right sidebar includes links for 'Table of contents', 'Install via apt', 'Next steps', and 'Get expert help'.

# Extended

- New custom components
- Use of more out-of-the-box components

The screenshot shows a documentation page for "Uninstall". The top navigation bar includes links for About, Installation (which is underlined), How to, Backup and Restore, Security, Storage Engines, Troubleshoot, Reference, and Installing PMM. A search bar and a user profile icon are also present.

The main content area has a sidebar on the left with links: Installation, Quickstart Guides, Install via apt, Installation guide, Run/Stop, apt Pinning, **Uninstall**, Install via yum, Kubernetes, Docker, Manual Download, Post-installation tips, Upgrade, and Downgrade. Two arrows point from the "Uninstall" link in the sidebar to the "Get expert help" section at the bottom right.

**Either remove the packages.**

```
$ sudo apt remove percona-server\
```

This will leave the data files (databases, tables, logs, configuration, etc.) behind. If you don't need them, you must remove them manually.

**Or purge the packages and delete data files.**

```
$ sudo apt purge percona-server\
```

**Warning:** This command removes all the packages and deletes all the data files (databases, tables, logs, and so on.).

The screenshot shows a navigation bar with links for About, Installation (which is underlined), How to, Backup and Restore, Security, Storage Engines, Troubleshoot, Reference, and Installing PMM. Below the navigation is a search bar and a user profile icon.

The main content area has a sidebar with links to Installation, Quickstart Guides, Install via apt, Installation guide (which is bolded), Run/Stop, apt Pinning, Uninstall, Install via yum, Kubernetes, Docker, Manual Download, Post-installation tips, Upgrade, and Downgrade. The Installation guide section is expanded, showing sub-links for Run/Stop, apt Pinning, Uninstall, and so on.

The main content area contains five numbered steps:

- 1 The first step is downloading the `percona-release` repository package:  

```
$ curl -O https://repo.percona.com/apt/percona-release_latest.generic_all.deb
```
- 2 Install the downloaded package with `apt` as root or with `sudo`, and then refresh the local cache to update the package information:  

```
$ sudo apt install gnupg2 lsb-release ./percona-release_latest.generic_all.deb  
$ sudo apt update
```
- 3 Use `percona-release` to set up the repository for the Percona Server for MySQL 8.0 version:  

```
$ sudo percona-release setup ps80
```
- 4 Install the server package with the `percona-release` command:  

```
$ sudo apt install percona-server-server
```

On the right side of the page, there is a "Table of Contents" and several footer links including "Install the latest version", "Improving performance (optional)", "Installing PMM", and "Get help".

We crafted journeys and woven them together so we could guide people into **discovering the value** of our software.

The screenshot shows the Percona Server for MySQL homepage. The header includes a navigation menu, a search bar, and a toggle switch. The main title is "Percona Server for MySQL". Below the title, there's a brief introduction: "Percona Server for MySQL is a high-performance, open-source drop-in replacement for MySQL. It allows you to enhance your database with superior performance, scalability, availability, and enhanced backups and is trusted by enterprises for demanding workloads." A section titled "Starting with Percona Server for MySQL is easy. Follow our documentation guides, and you'll be set up in a minute." is followed by two call-to-action buttons: "Quickstart Guides →" and "Production Requirements →".
