RE-THINKING PRODUCT ADOPTION THROUGH DOCUMENTATION DESIGN

Why would we?

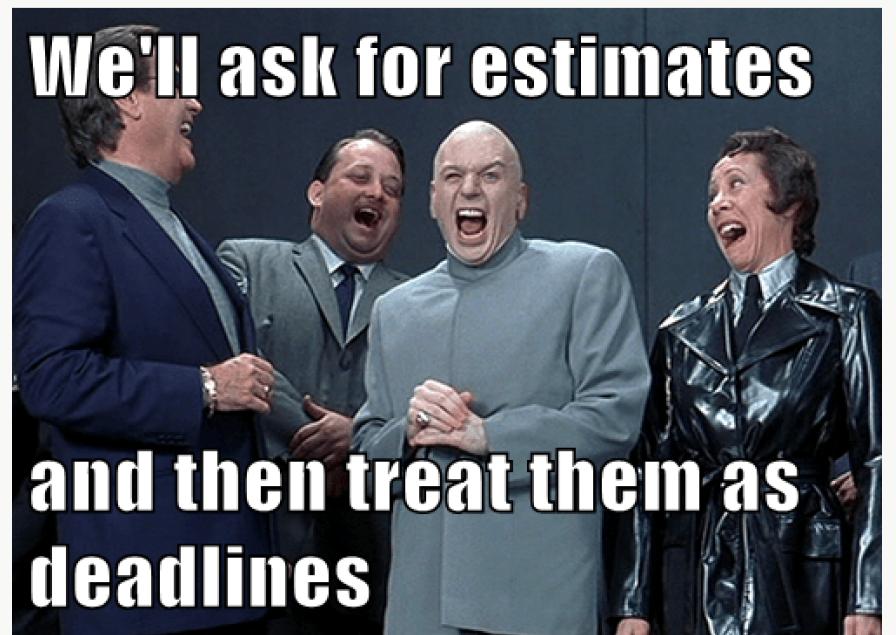

MOTIVATIONS

- Databases for everyone
- Promote independence
- More and better contributions
- Optimization of Support
- Don't break the bank

DATABASES = HARD SOFTWARE = HARD DESIGN = HARD

- Databases are technical and complex
- Expanding the user base means increasing research costs
- Error 404: Design culture not found
- Rapid software implementation ≠ Rapid UX implementation

While we create something better in-product,
what else could we do **now**?

Imagine assembling this...

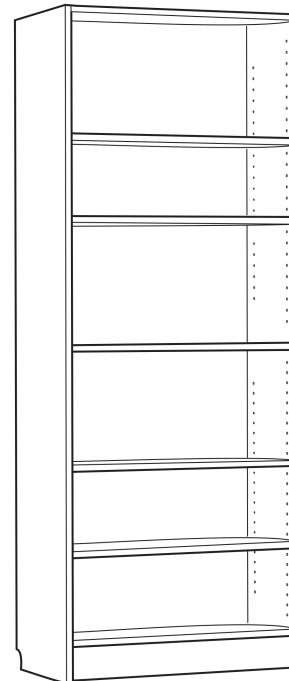

By only guessing

With documentation, we
can promote the adoption
and good use of products.

STRATEGIC ASSET

Who's reading our documentation?

How can it help them and us achieve our goals?

How do we know if it is helping?

We want documentation to reach out to more **developers interested in open-source databases** for their applications so that **adoption increases** through **more installations, proper retention, and evident ease of use.**

Version 0.6.0 of the Percona Operator for MySQL is a [tech preview release](#) and it is [not recommended for production environments](#). As of today, we recommend using Percona Operator for MySQL based on Percona XtraDB Cluster, which is production-ready and contains everything you need to quickly and consistently deploy and scale MySQL clusters in a Kubernetes-based environment, on-premises or in the cloud.

Upgrade Database and Operator

Starting from the version 0.6.0, Percona Operator for MySQL based on Percona Server for MySQL fully supports upgrades to newer versions. The upgradable components of the cluster are the following ones:

- the Operator;
- [Custom Resource Definition \(CRD\)](#),
- Database Management System (Percona Server for MySQL).

The list of recommended upgrade scenarios includes two variants:

- Upgrade to the new versions of the Operator and Percona Server for MySQL,
- Minor Percona Server for MySQL version upgrade without the Operator upgrade.

Upgrading the Operator and CRD

Note

The Operator supports [last 3 versions of the CRD](#) including the newest one, so it is technically possible to skip upgrading the CRD and just upgrade the Operator. If the CRD version is one of these, you will be able to continue using the old CRD and even carry on Percona Server for MySQL minor version upgrades with it. But the recommended way is to update the Operator and CRD.

The screenshot shows the 'Percona Operator for MySQL 0.6.0 (2023-09-05)' documentation page. The header includes the Percona logo, the title, a search bar, and a navigation bar with links like 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The main content area has a dark background with white text. It features a sidebar with navigation links for various MySQL versions and sections like 'Features', 'Highlights', 'New features', 'Improvements', 'Bugs Fixed', 'Deprecation and removal', and 'Supported Platforms'. The main content area contains detailed text about the Operator's functionality, including its role as a tech preview and its compatibility with the Percona XtraDB Cluster.

AFTER

The screenshot shows the 'Latest Release 8.0.33-25' documentation page. The header includes the Percona logo, the title, a search bar, and a navigation bar with links like 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The main content area has a light background with dark text. It features a sidebar with navigation links for 'About', 'Features', 'Release Notes', and 'Latest Release 8.0.33-25'. The main content area contains detailed text about the latest release, including a section on 'New features' and 'Bug fixes'. The 'New features' section lists changes like PS-8188, while the 'Bug fixes' section lists issues like PS-8647 and PS-8683. The overall design is cleaner and more modern than the 'Before' version.

The main content area has a sidebar with links: Installation, Quickstart Guides, Install via apt, Installation guide, Run/Stop, apt Pinning, Uninstall (which is bolded), Install via yum, Kubernetes, Docker, Manual Download, Post-installation tips, Upgrade, and Downgrade.

Two large arrows point from the "Uninstall" link in the sidebar to two separate admonition boxes:

- Either remove the packages.**
\$ sudo apt remove percona-server\
This will leave the data files (databases, tables, logs, configuration, etc.) behind. If you don't need them, you must remove them manually.
- Or purge the packages and delete data files.**
\$ sudo apt purge percona-server\
⚠ Warning: This command removes all the packages and deletes all the data files (databases, tables, logs, and so on.).

A call-to-action box at the bottom right says "Get expert help" with links to the Community Forum and Get a Percona Expert.

At the bottom of the page, there's a "Was this page helpful?" section with smiley and frowny face icons, and footer text about Percona LLC and cookie consent.

Once everything is updated and ready, you can follow the below tasks to install:

- ① The first step is downloading the `percona-release` repository package:

```
$ curl -O https://repo.percona.com/apt/percona-release_latest.generic_all.deb
```
- ② Install the downloaded package with `apt` as root or with `sudo`, and then refresh the local cache to update the package information:

```
$ sudo apt install gnupg2 lsb-release ./percona-release_latest.generic_all.deb  
$ sudo apt update
```
- ③ Use `percona-release` to set up the repository for the Percona Server for MySQL 8.0 version:

```
$ sudo percona-release setup ps80
```
- ④ Install the server package with the `percona-release` command:

```
$ sudo apt install percona-server-server
```

For more information on `percona-release` command see [Configuring Percona Repositories](#).

UNIFICATION

Imagine using the documentation.

How does it look like? How might we improve it?

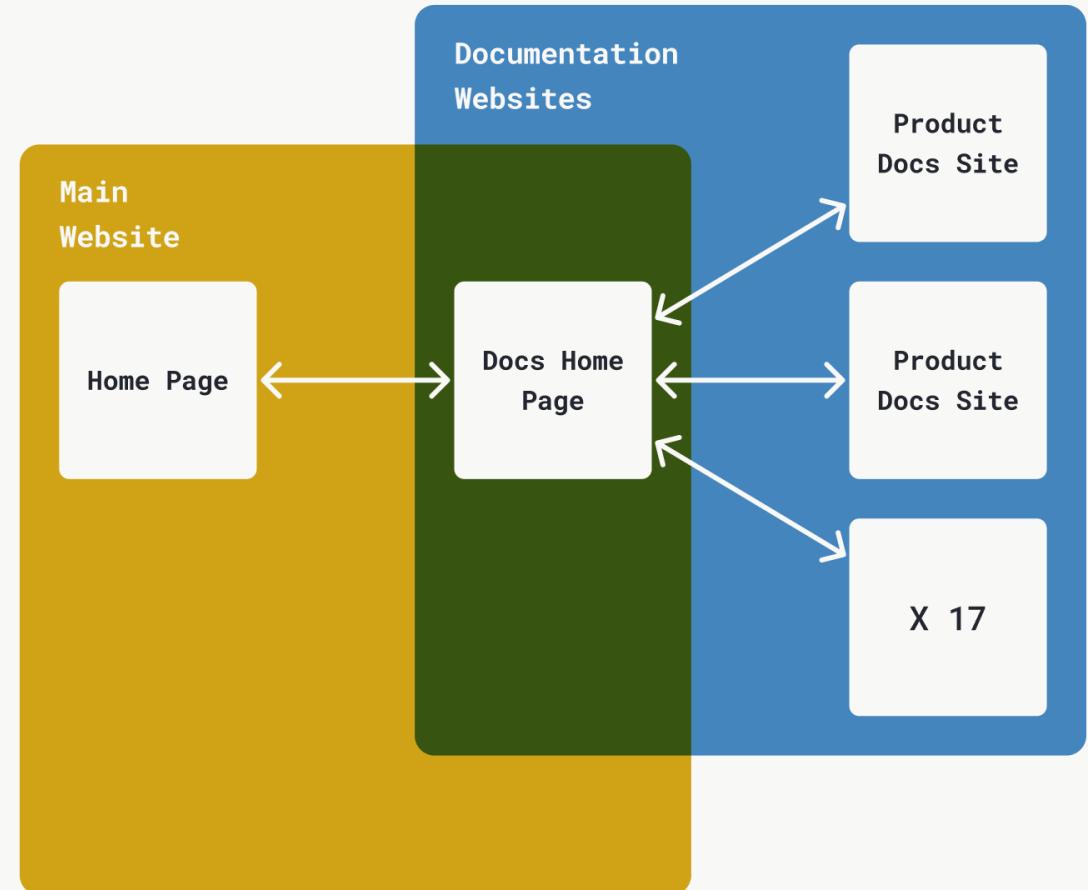

Does it feel whole and credible?

Changed things

- Documentation Home Page placement
- Main website → Documentation websites
- Kept link from Main Website Home Page

Gained

- Documentation Home feels similar to other documentation sites
- Navigation patterns are similar
- It feels like the same space
- It's whole and professional

OVERVIEW

Done

- Defined a strategy for the documentation • Established the co-ownership
- Made it clear and accessible • Shaped a better user experience • Unified the website

To do

- Outdated documentation • Inconsistent content across products
- Lack of practical examples
