Version 0.6.0 of the Percona Operator for MySQL is a **tech preview release** and it is **not recommended for production environments**. As of today, we recommend using Percona Operator for MySQL based on Percona XtraDB Cluster, which is production-ready and contains everything you need to quickly and consistently deploy and scale MySQL clusters in a Kubernetes-based environment, on-premises or in the cloud.

## Upgrade Database and Operator

Starting from the version 0.6.0, Percona Operator for MySQL based on Percona Server for MySQL fully supports upgrades to newer versions. The upgradable components of the cluster are the following ones:

- the Operator;
- Custom Resource Definition (CRD),
- Database Management System (Percona Server for MySQL).

The list of recommended upgrade scenarios includes two variants:

- Upgrade to the new versions of the Operator and Percona Server for MySQL,
- Minor Percona Server for MySQL version upgrade without the Operator upgrade.

### Upgrading the Operator and CRD

Note

The Operator supports **last 3 versions of the CRD** including the newest one, so it is technically possible to skip upgrading the CRD and just upgrade the Operator. If the CRD version is one of these, you will be able to continue using the old CRD and even carry on Percona Server for MySQL minor version upgrades with it. But the recommended way is to update the Operator and CRD.

## BEFORE

The screenshot shows the 'Percona Operator for MySQL 0.6.0 (2023-09-05)' documentation page. The header includes the Percona logo, title, a search bar, and a navigation bar with links like 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The main content area has a dark background with white text. It features a sidebar with navigation links for various MySQL versions and sections like 'Features', 'Highlights', 'New features', 'Improvements', 'Bugs Fixed', 'Deprecation and removal', and 'Supported Platforms'. The main content area contains detailed text about the Operator's functionality and its evolution from a tech preview to a general availability stage.

## AFTER

The screenshot shows the 'Latest Release 8.0.33-25' documentation page. The header includes the Percona logo, title, a search bar, and a navigation bar with links like 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The main content area has a light background with dark text. It features a sidebar with navigation links for 'About', 'Features', 'Release Notes', and 'Latest Release 8.0.33-25'. The main content area contains detailed text about the latest release, including 'New features' (with a list of bugs fixed like PS-8188), 'Bug fixes' (with a list of bugs like PS-8647), and 'Useful links' (with links to GitHub and product downloads). A large black arrow points from the 'BEFORE' screenshot to the 'AFTER' screenshot, indicating the transition.

- Guidelines to flag critical bits of content and decision-making points

## BEFORE

The screenshot shows a dark-themed web page for the 'Percona Operator for MySQL based on Percona Server for MySQL'. The top navigation bar includes a logo, a search bar, and a user icon. The main content area has a title 'Install Percona Server for MySQL on Google Kubernetes Engine (GKE)'. On the left is a sidebar with sections like 'Welcome', 'Features', 'Quickstart guides', 'Installation', 'System Requirements', 'Prerequisites', 'Create and configure the GKE cluster', and 'Release Notes'. The 'Prerequisites' section contains a note about running commands in the Google Cloud shell or local shell. The 'Create and configure the GKE cluster' section contains a note about using gcloud and provides a command example. A 'Note' callout box is present at the bottom.

## AFTER

The screenshot shows a light-themed web page for 'Percona Server for MySQL'. The top navigation bar includes a logo, a search bar, and a user icon. The main content area has a title 'Quickstart Guides'. On the left is a sidebar with sections like 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The 'Installation' section is currently selected. It contains a 'Quickstart Guides' heading with links to 'Install via apt', 'Install via yum', 'Kubernetes', 'Docker', 'Manual Download', 'Post-installation tips', 'Upgrade', and 'Downgrade'. Below this, there are sections for 'Ubuntu or Debian' and 'Red Hat Enterprise Linux or CentOS'. At the bottom, there are buttons for 'Install via apt' and 'Install via yum'.

The screenshot shows a documentation page for 'Uninstall'. The top navigation bar includes links for About, Installation (which is underlined), How to, Backup and Restore, Security, Storage Engines, Troubleshoot, Reference, and Installing PMM. A search bar and a user profile icon are also present. The main content area has a sidebar with links like Installation, Quickstart Guides, Install via apt, Installation guide, Run/Stop, apt Pinning, Uninstall (which is highlighted in blue), Install via yum, Kubernetes, Docker, Manual Download, Post-installation tips, Upgrade, and Downgrade. Two large arrows point from the 'Uninstall' link in the sidebar to two sections in the main content area. The first arrow points to a section titled 'Either remove the packages.' which contains a command line example: '\$ sudo apt remove percona-server\' and a note: 'This will leave the data files (databases, tables, logs, configuration, etc.) behind. If you don't need them, you must remove them manually.' The second arrow points to a section titled 'Or purge the packages and delete data files.' which contains a command line example: '\$ sudo apt purge percona-server\' and a warning: 'Warning: This command removes all the packages and deletes all the data files (databases, tables, logs, and so on.).' Below these sections is a 'Get expert help' box containing links to the Community Forum and Get a Percona Expert. At the bottom of the page is a footer with links to Percona LLC and its affiliates, a cookie consent notice, and a 'Was this page helpful?' section with smiley face icons.

Either remove the packages.

```
$ sudo apt remove percona-server\
```

This will leave the data files (databases, tables, logs, configuration, etc.) behind. If you don't need them, you must remove them manually.

Or purge the packages and delete data files.

```
$ sudo apt purge percona-server\
```

**Warning:** This command removes all the packages and deletes all the data files (databases, tables, logs, and so on.).

# **USER EXPERIENCE**

What can we do for them?

How might we anticipate their needs?

How can we make them succeed?

# Invested in

- Understanding the people's needs
- Experimenting with the navigation
- Creating guidelines for navigation streamlining
- Forming quickstart guides
- Make visually prominent guides

The screenshot shows a navigation bar with links: About, **Installation**, How to, Backup and Restore, Security, Storage Engines, Troubleshoot, Reference, and Installing PMM. Below the navigation is a search bar and a user profile icon. The main content area has a dark header "Installation guide". Under "Installation", there are sections for Quickstart Guides, Install via apt, and Installation guide (which is expanded). The "Installation guide" section contains sub-links: Run/Stop, apt Pinning, Uninstall, Install via yum, Kubernetes, Docker, Manual Download, Post-installation tips, Upgrade, and Downgrade. To the right of the sidebar, a text block says: "Before starting, we advise updating the apt repositories and installing curl download utility to fetch the package. If you want to fetch the package manually, follow this guide instead: [Manual Installation](#)". Below this is a code block: 

```
$ sudo apt update  
$ sudo apt install curl
```

. A note follows: "Once everything is updated and ready, you can follow the below tasks to install:". A numbered list of steps is provided:

- ① The first step is downloading the `percona-release` repository package:  

```
$ curl -O https://repo.percona.com/apt/percona-release_latest.generic_all.deb
```
- ② Install the downloaded package with `apt` as root or with `sudo`, and then refresh the local cache to update the package information:  

```
$ sudo apt install gnupg2 lsb-release ./percona-release_latest.generic_all.deb  
$ sudo apt update
```
- ③ Use `percona-release` to set up the repository for the Percona Server for MySQL 8.0 version:  

```
$ sudo percona-release setup ps80
```
- ④ Install the server package with the `percona-release` command:  

```
$ sudo apt install percona-server-server
```

At the bottom, a note says: "For more information on `percona-release` command see [Configuring Percona Repositories](#)". Step 5 is partially visible at the bottom.

We crafted journeys and woven them together so we could guide people by their hand, through key touchpoints, into discovering what they needed.

# **UNIFICATION**

Imagine using the documentation.

How does it look like? How might we improve it?

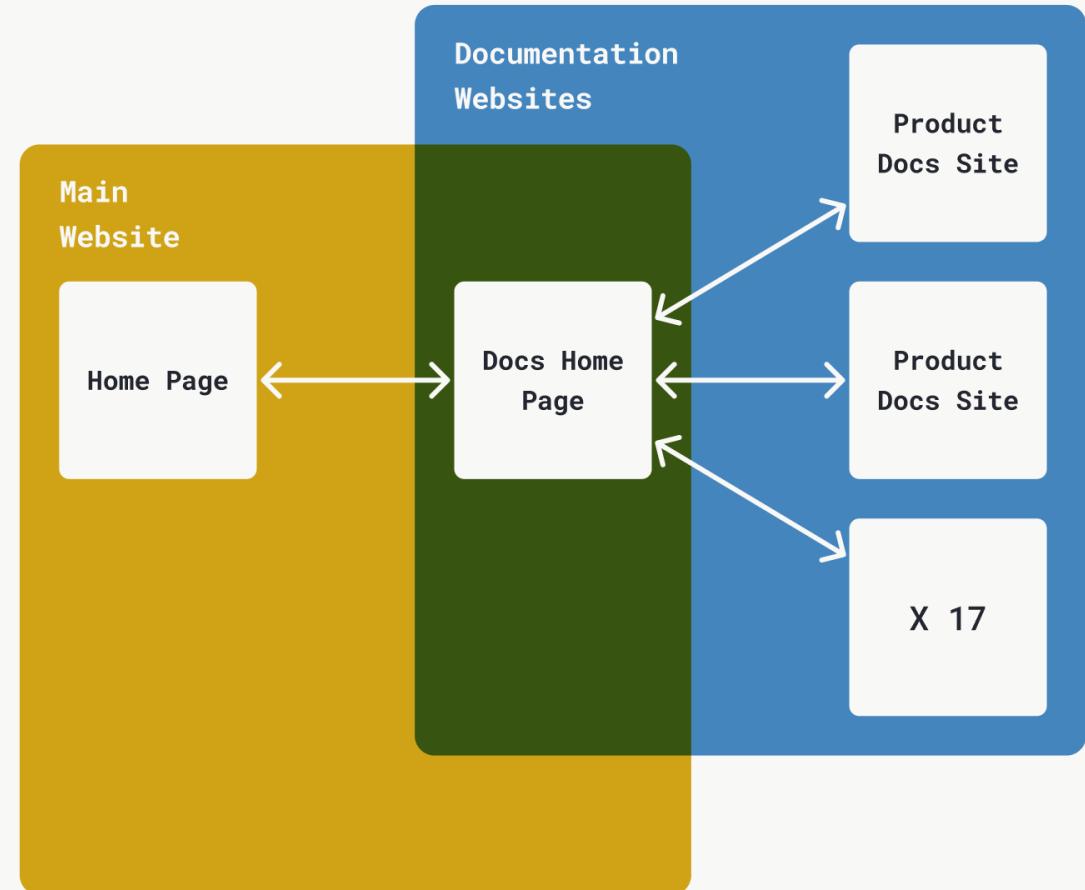

Does it feel whole and credible?

## Changed things

- Documentation Home Page placement
- Main website → Documentation websites
- Kept link from Main Website Home Page

## Gained

- Documentation Home feels similar to other documentation sites
- Navigation patterns are similar
- It feels like the same space
- It's whole and professional

# **OVERVIEW**

## **Done**

- Defined a strategy for the documentation • Established the co-ownership
- Made it clear and accessible • Shaped a better user experience • Unified the website

## **To do**

- Outdated documentation • Inconsistent content across products
- Lack of practical examples
