The screenshot shows the TAGUS design system interface. On the left, a sidebar lists various atomic and component-level UI elements. The 'Business Pickers' component is highlighted. To the right, a detailed description of the 'Guests Picker' is provided, along with a screenshot of the component's implementation. The screenshot shows a modal dialog titled 'Guests Picker' with a dropdown menu set to '2 adults, 2 children'. Underneath these are two dropdown menus: 'Child 1 age' (value 6) and 'Child 2 age' (value 17), each with a minus button, a plus button, and a dropdown arrow.

Business Pickers

A popup style component that displays advanced functionality on specific business inputs, like guests information, flight passengers, amounts of tickets, and others.

Guests Picker

This type of picker is designed for the accommodation business model. This component allows the user to select the total amount of guests that are going to figure in the reservation, and shape the price.

As a reference, use the [Datapicker documentation](#) to support and clear most doubts regarding the interaction. If you still have any doubts, contact us.

To gather more information on interaction states, check the numeric stepper sandbox in the file `tagus-components.xd`.
