RE-THINKING PRODUCT ADOPTION THROUGH DOCUMENTATION DESIGN

Why would we?

MOTIVATIONS

- Databases for everyone
- Promote independence
- More and better contributions
- Optimization of Support
- Don't break the bank

**DATABASES = HARD
SOFTWARE = HARD
DESIGN = HARD**

Technical, complex, costly

Error 404: Design culture not found

Rapid software ≠ Rapid UX

**We'll ask for estimates
and then treat them as
deadlines**

While we create something better in-product,
what else could we do **now**?

Imagine assembling this...

By only guessing

With documentation, we
can promote the adoption
and good use of products.

DOCUMENTATION DESIGN RATIONALE

DEFINE A STRATEGY

Who's reading our documentation?

How can it help them and us achieve our goals?

How do we know if it is helping?

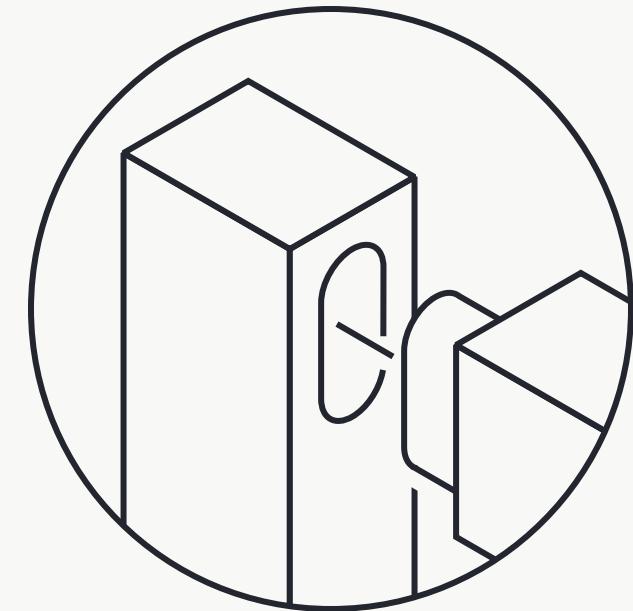

We want documentation to reach out to more **developers** interested in open-source databases for their applications so that adoption increases through more **installations**, proper **retention**, and evident **ease of use**.

ESTABLISH CO-OWNERSHIP

Who could help?

Where's the knowledge?

Who could share responsibilities?

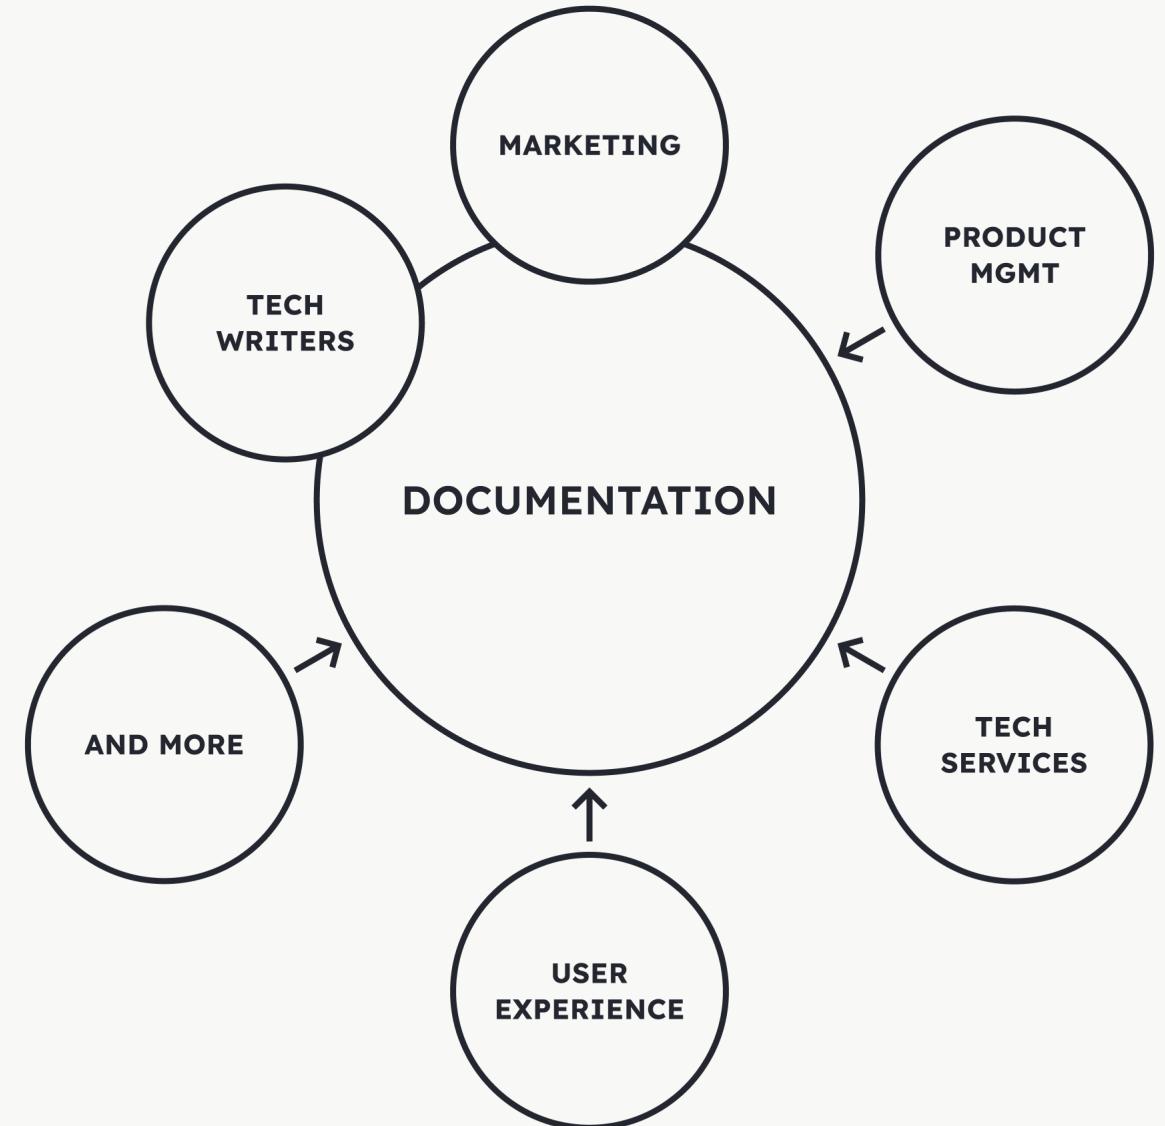

Kept

- Creation of content • Management
- Data analysis

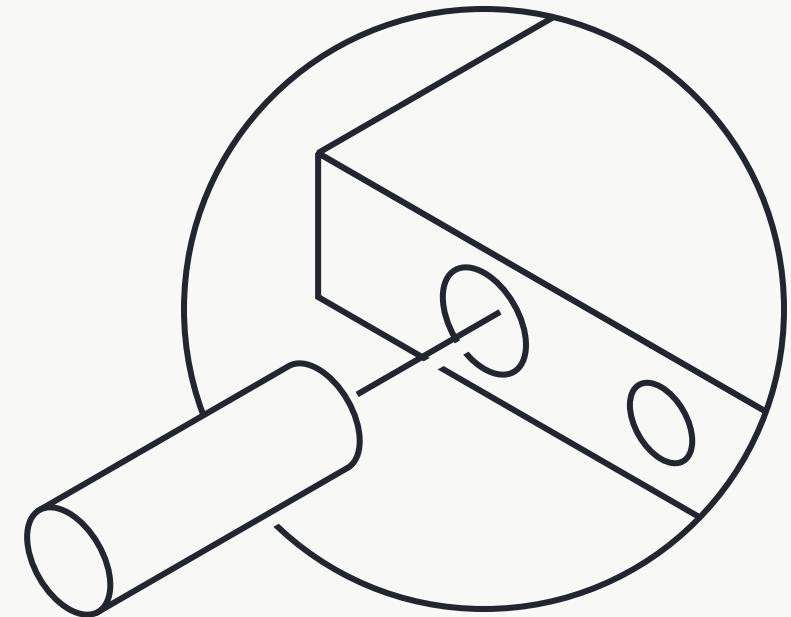

Added

- Speed • Visibility • Openness
- User's POV • Horizontal communication
- New methods • New tools

BOOST CLARITY

Is the content accessible to people?
Does it provide intuitive access to their needs?
Are there untapped opportunities?

Tweaked

- Applied readable fonts
- Added spacing
- Increased chromatic contrast
- Increased reading contrast (headings Vs. running text blocks)
- On-brand re-styling

The header includes the Percona logo, title, a 'Search' bar, and a navigation bar with links like 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The main content area has a dark blue background with white text. It features a sidebar with sections like 'Welcome', 'Features', 'Quickstart guides', 'Installation', 'Configuration and Management', 'Troubleshooting', 'Reference', and 'Release Notes'. The main content includes a 'Highlights' section with bullet points about Smart Upgrade functionality and HAProxy load balancer support, and a 'New features' section listing K8SPS-283 and K8SPS-160. A 'Table of contents' sidebar on the right lists 'About', 'Highlights', 'New features', 'Improvements', 'Bugs Fixed', 'Deprecation and removal', and 'Supported Platforms'.

The main content area has a light blue background with dark blue text. It features a sidebar with sections like 'About', 'Features', 'Release Notes', and 'Latest Release 8.0.33-25'. The main content includes a 'New features' section with a bullet point about PS-8188, a 'Bug fixes' section with a list of issues like PS-8647 through PS-8747, and a 'Useful links' section with links to GitHub and product downloads. A 'Table of contents' sidebar on the right lists 'About', 'Release highlights', 'New features', 'Bug fixes', 'Useful links', and 'Get expert help'.

Added

- Guidelines and resources to place icons, buttons, dividers, and tabs
- Guidelines to flag critical bits of content and decision-making points

BEFORE

The screenshot shows a documentation page for the Percona Operator for MySQL. The header includes the title 'Percona Operator for MySQL based on Percona Server for MySQL' and a search bar. The main content is titled 'Install Percona Server for MySQL on Google Kubernetes Engine (GKE)'. It contains sections for 'Prerequisites', 'System Requirements' (specifically 'Install on Google Kubernetes Engine (GKE)'), and 'Create and configure the GKE cluster'. A note at the bottom of the 'Create and configure the GKE cluster' section provides a command-line example:

```
$ gcloud container clusters create my-cluster-name --project <project name> --zone us-central1
```

A 'Note' callout box is present at the bottom.

AFTER

The screenshot shows a documentation page for Percona Server for MySQL. The header includes the title 'Percona Server for MySQL' and a search bar. The main content is titled 'Quickstart Guides'. It features a 'Quickstart Guides' section with links for 'Install via apt', 'Install via yum', 'Kubernetes', 'Docker', 'Manual Download', and 'Post-installation tips'. Below this, there are sections for 'Install via apt' and 'Install via yum'. A note at the bottom of the 'Install via apt' section provides a command-line example:

```
$ sudo apt update  
$ sudo apt install curl
```

The right sidebar includes links for 'Table of contents', 'Install via apt', 'Next steps', and 'Get expert help'.

Extended

- New custom components
- Use of more out-of-the-box components

The screenshot shows a documentation page for "Uninstall". The top navigation bar includes links for About, Installation (which is underlined), How to, Backup and Restore, Security, Storage Engines, Troubleshoot, Reference, and Installing PMM. A search bar and a user profile icon are also present.

The main content area has a sidebar on the left with links: Installation, Quickstart Guides, Install via apt, Installation guide, Run/Stop, apt Pinning, **Uninstall**, Install via yum, Kubernetes, Docker, Manual Download, Post-installation tips, Upgrade, and Downgrade. Two arrows point from the "Uninstall" link in the sidebar to the "Get expert help" section at the bottom right.

The "Uninstall" section contains two bullet points:

- Either remove the packages.
\$ sudo apt remove percona-server\
- This will leave the data files (databases, tables, logs, configuration, etc.) behind. If you don't need them, you must remove them manually.
- Or purge the packages and delete data files.
\$ sudo apt purge percona-server\
- Warning:** This command removes all the packages and deletes all the data files (databases, tables, logs, and so on.).

The "Get expert help" section at the bottom right contains the following text:

The screenshot shows a navigation bar with links for About, Installation (which is selected), How to, Backup and Restore, Security, Storage Engines, Troubleshoot, Reference, and Installing PMM. Below the navigation is a search bar and a user profile icon.

The main content area has a sidebar with links to Installation, Quickstart Guides, Install via apt, Installation guide (which is expanded to show Run/Stop, apt Pinning, Uninstall, Install via yum, Kubernetes, Docker, Manual Download, Post-installation tips, Upgrade, and Downgrade), and a 'Table of Contents' link.

The main content area contains five numbered steps:

- 1 The first step is downloading the `percona-release` repository package:

```
$ curl -O https://repo.percona.com/apt/percona-release_latest.generic_all.deb
```
- 2 Install the downloaded package with `apt` as root or with `sudo`, and then refresh the local cache to update the package information:

```
$ sudo apt install gnupg2 lsb-release ./percona-release_latest.generic_all.deb  
$ sudo apt update
```
- 3 Use `percona-release` to set up the repository for the Percona Server for MySQL 8.0 version:

```
$ sudo percona-release setup ps80
```
- 4 Install the server package with the `percona-release` command:

```
$ sudo apt install percona-server-server
```
- 5 It should now be installed! Percona Server runs automatically after installation. To control the
