DOCUMENTATION DESIGN RATIONALE

DEFINE A STRATEGY

Who's reading our documentation?

How can it help them and us achieve our goals?

How do we know if it is helping?

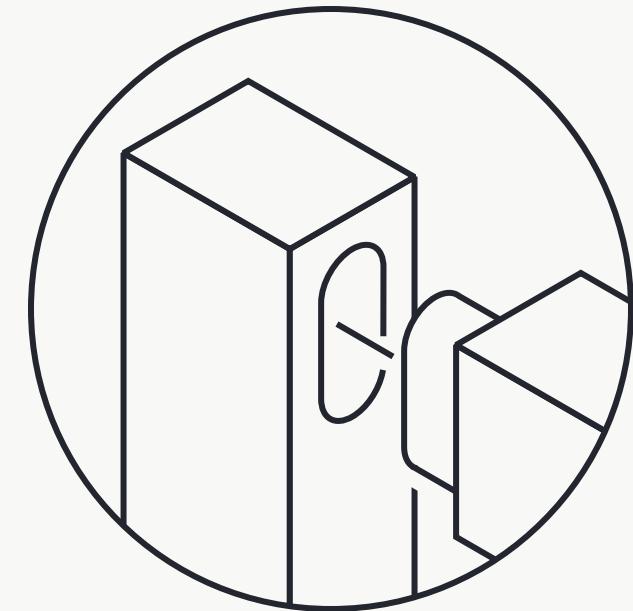

We want documentation to reach out to more **developers** interested in open-source databases for their applications so that adoption increases through more **installations**, proper **retention**, and evident **ease of use**.

ESTABLISH CO-OWNERSHIP

Who could help?

Where's the knowledge?

Who could share responsibilities?

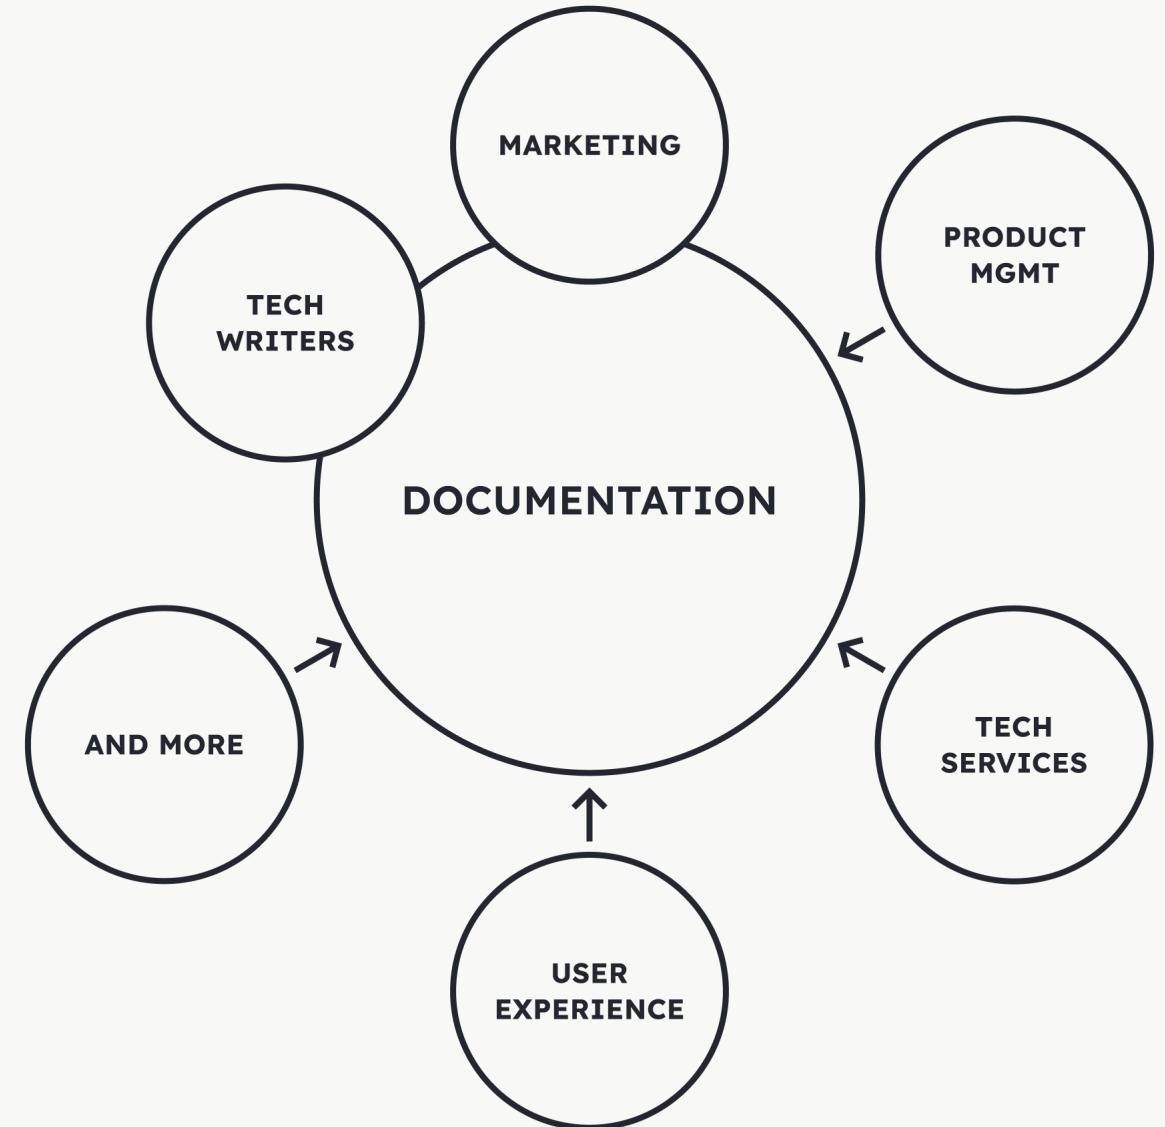

Kept

- Creation of content • Management
- Data analysis

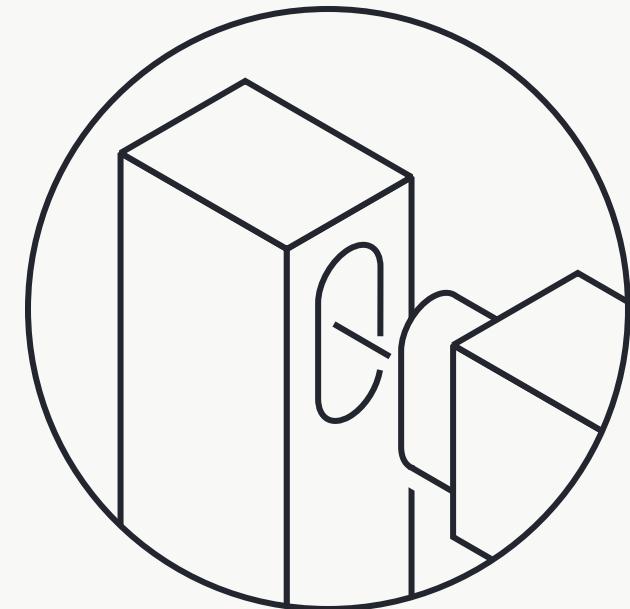

Added

- Speed • Visibility • Openness
- User's POV • Horizontal communication
- New methods • New tools

BOOST CLARITY

Is the content accessible to people?
Does it provide intuitive access to their needs?
Are there untapped opportunities?

Tweaked

- Applied readable fonts
- Added spacing
- Increased chromatic contrast
- Increased reading contrast (headings Vs. running text blocks)
- On-brand re-styling

The screenshot shows the Percona Operator for MySQL 0.6.0 documentation page from September 5, 2023. The header includes the Percona logo, the title "Percona Operator for MySQL 0.6.0 (2023-09-05)", and a search bar. The main content area has a dark background with white text. It features a sidebar with navigation links like "Welcome", "Features", "Quickstart guides", "Installation", "Configuration and Management", "Troubleshooting", "Reference", and "Release Notes". The main content includes sections for "Highlights", "New features", "Improvements", and "Bugs Fixed". A note at the top states: "As of today, we recommend using Percona Operator for MySQL based on Percona XtraDB Cluster, which is production-ready and contains everything you need to quickly and consistently deploy and scale MySQL clusters in a Kubernetes-based environment, on-premises or in the cloud." A "Table of contents" sidebar on the right lists "About", "Highlights", "New features", "Improvements", "Bugs Fixed", "Deprecation and removal", and "Supported Platforms". The footer includes a "percona/k8sps-docs" link and a "Download PDF" button.

The main content area has a light background with dark text. It features a navigation bar with links for "About", "Installation", "How to", "Backup and Restore", "Security", "Storage Engines", "Troubleshoot", "Reference", and "Installing PMM". The main content includes sections for "About", "Features", "Release Notes", and "Latest Release 8.0.33-25". The "Latest Release 8.0.33-25" section shows release dates for 2023 and 2022. Below this, there are sections for "New features", "Bug fixes", and "Useful links". The "New features" section lists "PS-8188" and "PS-8647". The "Bug fixes" section lists "PS-8647", "PS-8683", "PS-8713", "PS-8719", and "PS-8747". The "Useful links" section links to the "Percona Server for MySQL GitHub location". A "Table of contents" sidebar on the right lists "About", "Release highlights", "New features", "Bug fixes", "Useful links", and "Get expert help". The footer includes a "percona/psmysql-do..." link and a "Download product binaries, packages, and tarballs at Percona Product Downloads" link.

BEFORE

The screenshot shows a documentation page for the Percona Operator for MySQL on Google Kubernetes Engine (GKE). The page has a dark header with the title 'Percona Operator for MySQL based on Percona Server for MySQL' and a search bar. A sidebar on the left contains links for 'Welcome', 'Features', 'Quickstart guides', 'Installation' (with a dropdown for 'System Requirements' and 'Install on Google Kubernetes Engine (GKE)'), 'Prerequisites', 'Create and configure the GKE cluster', and 'Release Notes'. The main content area is titled 'Install Percona Server for MySQL on Google Kubernetes Engine (GKE)'. It includes a 'Table of contents' sidebar with sections like 'Prerequisites', 'Create and configure the GKE cluster', and 'Troubleshooting'. Below this is a detailed guide with steps for installing the operator and deploying a MySQL cluster. A note at the bottom provides a command for logging into the GKE cluster using gcloud. A 'Note' callout box is present at the bottom.

The screenshot shows a documentation page for Percona Server for MySQL. The header includes the title 'Percona Server for MySQL', a search bar, and a navigation menu with links for 'About', 'Installation', 'How to', 'Backup and Restore', 'Security', 'Storage Engines', 'Troubleshoot', 'Reference', and 'Installing PMM'. The main content area is titled 'Quickstart Guides' and features a sidebar for 'Installation' with 'Quickstart Guides' selected. It lists various installation methods: 'Install via apt' (selected), 'Install via yum', 'Kubernetes', 'Docker', 'Manual Download', 'Post-installation tips', 'Upgrade', and 'Downgrade'. Below this is a section for 'Package Manager' with options for 'Ubuntu or Debian' (using apt) and 'Red Hat Enterprise Linux or CentOS' (using yum). A large arrow points from the 'Before' screenshot to this section. The page also includes a 'Table of contents' sidebar and a 'Note' callout box at the bottom.

The screenshot shows a documentation page for "Uninstall" on the Percona website. The top navigation bar includes links for About, Installation (which is underlined), How to, Backup and Restore, Security, Storage Engines, Troubleshoot, Reference, and Installing PMM. A search bar and a user profile icon are also present.

The main content area has a sidebar on the left with links for Installation, Quickstart Guides, Install via apt, Installation guide, Run/Stop, apt Pinning, Uninstall (which is bolded), Install via yum, Kubernetes, Docker, Manual Download, Post-installation tips, Upgrade, and Downgrade. Two arrows point from the "Uninstall" link in the sidebar to the two main sections of the page.

Either remove the packages.

```
$ sudo apt remove percona-server\
```

This will leave the data files (databases, tables, logs, configuration, etc.) behind. If you don't need them, you must remove them manually.

Or purge the packages and delete data files.

```
$ sudo apt purge percona-server\
```

Warning: This command removes all the packages and deletes all the data files (databases, tables, logs, and so on.).

The screenshot shows the 'Installation guide' page from the Percona website. The navigation bar includes links for About, Installation (which is active), How to, Backup and Restore, Security, Storage Engines, Troubleshoot, Reference, and Installing PMM. A search bar is also present. The main content area is titled 'Installation' and contains several sections: 'Quickstart Guides', 'Install via apt' (with a sub-section for 'Installation guide'), 'Install via yum', 'Kubernetes', 'Docker', 'Manual Download', 'Post-installation tips', 'Upgrade', and 'Downgrade'. To the right of the sidebar, there is a large callout box containing terminal commands and numbered steps for installing Percona Server. The steps are:

- 1 The first step is downloading the `percona-release` repository package:
\$ curl -O https://repo.percona.com/apt/percona-release_latest.generic_all.deb
- 2 Install the downloaded package with `apt` as root or with `sudo`, and then refresh the local cache to update the package information:
\$ sudo apt install gnupg2 lsb-release ./percona-release_latest.generic_all.deb
\$ sudo apt update
- 3 Use `percona-release` to set up the repository for the Percona Server for MySQL 8.0 version:
\$ sudo percona-release setup ps80
- 4 Install the server package with the `percona-release` command:
\$ sudo apt install percona-server-server
